WOODY BIOMASS HEAT: MAKING IT WORK FOR COMMUNITIES

You are invited to a practical workshop to develop projects that use woody biomass to produce thermal energy.

- Explore woody biomass heating potential for schools, recreational facilities, public and commercial buildings and industrial drying processes.**
- Learn about feasibility and construction, technology options, financing, air quality, and visit real success stories in this two day workshop.**
- Network with fellow project proponents, engineering and design firms, fuel suppliers, funding agencies, and other entities that can help make projects happen.**

Presented by Sustainable Northwest, Central Oregon Intergovernmental Council, Resource Innovations, US Forest Service Fuels for Schools and Beyond Initiative, Oregon Department of Forestry, Northwestern California Resource, Conservation and Development Council, Mt. Adams Resource Stewards, Watershed Research and Training Center

MT. BACHELOR VILLAGE CONFERENCE CENTER, BEND, OREGON
