

**Rogue River-Siskiyou NF, Applegate RD
Upper Applegate Road Fuels project**

Location:

The project is located in the Applegate Watershed, within and adjacent to the Applegate Alternate Management Area under the NW Forest Plan. Landownership within this watershed is national forest, BLM, and private lands. The project is being planned as a HFRA project.

Purpose:

The planning area is 2,200 acres. The project is primarily intended to treat hazardous fuels along the primary roads, and routes into residences and community facilities. The planning will be completed in FY 05 with implementation scheduled to begin in FY 06; it will be a multi-year implementation.

This project was identified in the Applegate Fire Protection Plan. While this plan was completed in 2001, two years before the HFRA, the Applegate Fire Protection plan continues today as one of the early models of Community Fire Protection Planning completed with community and agency collaboration.

Partners:

Partners include: Medford District BLM, Oregon Department of Forestry, Rural Fire District #9, and the Applegate Fire Plan group for the planning of this project. Additional partners are anticipated for the implementation aspects of this project.
